

Light-Speed Wonders At Infinite Gamma Factors. The Mystique Of C.

Attaining light speed is a code I have spent a lot of time thinking about as of late and what exactly would happen at light speed or at velocities vanishingly small increments above light speed but where these borderline superluminal velocities would in the spirit of nature not manifest as though superluminal in effects thereby conserving principles of causality and not implying non-locality issues otherwise. At the speed of light, perhaps entire new realms can be discovered thus altering the meaning of what travel implies. I would love to be able to travel faster than light, but am almost of the mind set to say, forget about superluminal travel, light speed is even more wonderful and would imply eternalization of the spacecraft and crew relative to the back ground and any folks doing warp drive superluminal travel. Whats more profound is that variously infinite gamma factors enable different extents of eternalization relative to the background and even relative to superluminal warp-drive travel folks. An even more profound aspect of light speed travel at variously infinite gamma factors that are separated by infinite quantities is that each such infinite gamma factor where attained by a spacecraft traveling at light speed would imply eternalization of the spacecraft relative to the eternalization of a spacecraft traveling at the next lower infinite gamma factor. Variously infinite gamma factors in inertial space travel each are a key waiting to unlock the secrets of meta-eternity and hyper-physical-eternity. This book is a mathematical axiomatic presentation of what all this may mean.
