

Finite Theory of the Universe, Dark Matter Disproof and Faster-Than-Light Speed

The mathematical representation of General Relativity uses a four dimensional reference frame to position in time and space an object and tells us time is a linear variable that can have both a negative and positive value. This therefore implies time becomes itself a dimension and causes the theory opening doors to ideas such as: singularity, wormhole, paradoxes and so on. You will learn from this book a new mathematical model that is being suggested which is based on the classical mechanics. The theory is objective and predicts low scale GPS gravitational time dilation, perihelion precession disparity, gravitational light bending, artificial faster-than-light motion, up to the rotation curve for all galaxies, natural faster-than-light galactic expansion and even the constitution of a black hole. You will enjoy how this book shows Einstein to be wrong and how faster-than-light travel is not science-fiction.*** November 2013 Update ***The Large Underground Xenon (LUX) failed to detect dark matter. This confirms the veracity of this book and it is the original one challenging this notion.
