

Humans and their Universes

THIS BOOK REACHED # 25 ON AMAZONS LIST OF BEST-SELLING COSMOLOGY BOOKS.Updated Humans And Their Universes Or Science Out Of The Straitjacket: Intergalactic And Time Travel, Einsteins Relativity, Bohrs Atomic Model, Dark Matter, Dark And Negative Energy, String Theory / Unification And The Law Of Conservation

With Liberated Sciences Implications For Religion And Philosophy As Well As Everyday Life In The Light Of The Concept of an Electronic And Holographic Universe Shaped Like A Mobius Loop I saw a video (Hidden Dimensions: Exploring Hyperspace - <http://www.worldsciencefestival.com/hidden-dimensions>) in which it was stated that mathematicians are free to imagine anything while physicists work in a very different environment constrained by experiment, and that the American physicist Richard Feynman (1918-1988) said scientists work in a straitjacket. Well, Albert Einstein (1879-1955) said Imagination is more important than knowledge so lets see what happens when we throw away everyday tradition and conformity, let our imaginations fly (while trying to stay grounded in science and technology), and thus release science from its straitjacket! This little book has its beginnings in cellular automata (in mathematics and computer science, collections of cells on a grid that evolve through a number of discrete time steps according to a set of rules based on the states of neighbouring cells) and grew into a belief that the universe (electromagnetism, gravitation, space-time and, as well see, 5th dimensional hyperspace) has a digital (electronic) foundation. This belief can be supported by 12 steps that begin with an experiment in electrical engineering at Yale University in the USA. These steps logically lead to assertions of instant intergalactic travel,

time travel into the past as well as the future (neither of which can be altered), of unification of the large-scale universe with small-scale quantum particles, that the universe is a computer-generated hologram, that everyone who ever lived can have eternal life and health, that motion is an illusion caused by the rapid display of digitally generated frames, that the entire universe is contained in (or unified with) every one of its particles, that the terms computer-generated and computer do not necessarily refer to an actual machine sending out binary digits or qubits, that we only possess a small degree of free will, that humanity could have created our universe and ourselves though unification physics says a being called God must nevertheless exist and likewise be Creator, and that Einsteins $E=mc^2$ equation could be modified for the 21st century, reflecting the digital nature of reality. Though these things may be unbelievable in 2011, we should not ignore the possibilities of their being true or of their showing that reality is indeed digital because they are the logical product of already demonstrated electrical engineering and trips into space, science is investigating time travel and unification, the notion of motion has been suspect to some ever since the ancient Greek philosopher Zeno of Elea (490?-420? B.C.) argued that motion is absurd, and many religions worldwide speak of God and have some concept of survival of bodily death.
