

An available water supply for Eastern Texas could be developed with small depletion of the Red River in Louisiana. Hydrology allows aqueduct water flow from the Red River to Caddo Lake in Louisiana and its length would be about five miles with sales of approximately \$30 Million dollars a year. This Booklet shares three Concepts: CaddoRam1 uses pumps for aqueduct flow. CaddoRam2 uses a dam for aqueduct flow. CaddoRam3 combines CaddoRam1 and 2 Concepts for a staged installation. Note: This is an updated version of a previous booklet published South Central USA water resource Caddo Lake can become a supply for Shreveport and East Texas -Caddo Lake. As noted, Caddo Lake receives its water from all of the stream segments in the Cypress Basin. Its ecological and water qualities are matters of ongoing review by state agencies. As to Caddo Lake itself, the Texas Water Development Board (TWDB) officially noted that it is a future drinking water source for withdrawals by the City of Shreveport, Louisiana. TWDB noted however that “the Board’s forecasts suggest that environmental impacts from potential significant lowering of Caddo Lake levels through expanded water supply use . . . should preclude it from being a viable site of future water supplies.” (Texas Water Development Board. 1997)... Caddo Lake. Helping Local People to Use Their Educational Infrastructure for Ecological Stewardship of Ramsar Wetlands Texas shows a concern because Shreveport may need Caddo Lake water. The CaddoRam concept can store many months of water from the Red River in Caddo Lake and also can be available for Shreveport.
