

## Sound and Light

Real World Science is science made simple! This series introduces eight major topics in the science curriculum that students must master. A lively text relates factual information to familiar events and situations in the everyday world. Colorful artwork, fascinating fact boxes, and loads of easy-to-do experiments will engage students and help them understand the science concepts on which they will be tested.

**Waves: Light, Sound, and the nature of Reality - YouTube** Sound waves move much slower than light waves at speeds of about 1,125 feet (about 340 meters) per second. Sound waves are also different in the sense that they travel through any type of substance, whether solid, liquid or gas, whereas light travels best through empty space. **Sound and Light - 4th Grade Sqworl** The Wharfs Sound and Light Spectacular.
