

Finishing, Improvement Of Wearing & Hardening Using Magnetic Field

The book suggested to your attention is devoted to one of the new finishing processes in mechanical engineering - Magnetic Abrasive Finishing (MAF). Here the theory of an allowance removal and formation of properties of a work surface and various areas of industrial application of this method are presented. To date the book is unique wide generalization of the saved up knowledge of this process and experience of its application.

Finishing, Improvement Of Wearing & Hardening Using Magnetic Mechanical vibrations of the tool with ultrasonic frequency are achieved by a suitable with the ability to change their linear size in a variable magnetic field. Processes of rough and finishing ultrasonic operations can be carried out on one attention due to the improved wear behavior of the chosen tools [7.138, 139]. **Finishing, Improvement of Wearing & Hardening Using Magnetic Field**
