

Temperature Plant Stress Management: Dr. Luis Alberto Lightbourn Rojas

The study and comprehension of phenomena that limit the growth and reproduction of plants in general, and particularly domestic plants, is basic for production, management and traceability of biomass with high commercial value. Within all limiting factors, STRESS by temperature is the cornerstone where to build basic knowledge on that allows us to develop technologies ad hoc and to improve the competitiveness of the producers. First of all, this implies per se not disturbing the natural adaptation mechanisms of the plant. The Management of biodynamic phenomena is based on the complex thinking and complex systems complexity.
