

User Innovators in the Silver Market: An Empirical Study among Camping Tourists (Forschungs-/Entwicklungs-/Innovations-Management)

In this study among camping tourists of all age groups between 19 and 86 years of age, Konstantin Wellner compares key characteristics regarding innovative behavior of different age groups. The focus of the analysis is on the so-called Silver Market segment (consumers of at least 55 years) which gains importance to the demographic shift. Generally, older users are still actively innovating, especially if it relates to age-specific improvements (e.g., comfort and compatibility to other equipment). Analysis by a Structural Equation Model showed that the most important determinant of innovative behavior for older users is technical expertise and that being relatively ahead of trends increases their dissatisfaction with existing products. Additional evidence was found that user with high use experience suffer from functional fixedness.
